

# LED Chain Light

The LED Chain Modules are ideal for illuminating channel lettering, signage or to create a halo effect simply and cost effectively.

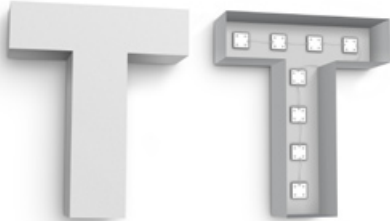

The LED Chain Light System is a low voltage, long life alternative to neon and fluorescent lighting systems for channel letters and other signage requirements. Each LED Chain Module is covered in a UV stable resin rendering them suitable for outdoor use, and combines four single colour LEDs to give an even spread of coloured light.

The LED Chain Modules are available in four colours: red, green, blue, white. Depending on your application, the distance between each module may be varied to optimise the intensity of the lighting effect. The LED Chain Modules feature aluminium backing for better heat dissipation, as well as double sided adhesive tape to ensure a simple and problem free installation.

## Suggested Applications

- Lighting for Channel Letters
- Lighting for any interior and exterior installations
- Backlight for light box
- Most cases where neon replacement is required

## Accessories

- Power Supply (dependant on number of modules)
