

World Class Feature Lighting Solutions

Argyle Square, Carlton, Melbourne

Bourke Street Mall, Melbourne CBD
In time for the 2006 Commonwealth Games

Lighting is more than just an answer to evening's gloom; it's an atmosphere artist, a palette from which mood, cheer, cool and magnetism are derived. Successful feature lighting is key to achieving a distinctive impression.

As host for the 2006 Commonwealth Games, Melbourne City Council was intent on showcasing Melbourne as a design hotspot and employed feature lighting to highlight two of Melbourne's shared public spaces. Lighting solutions by Coolon were used to provide key elements for Melbourne's enigmatic charm.

Argyle Square, Carlton, was transformed into a sleek, neo-cool meeting place, the main feature a procession of six silver steel pillars that glow ice-blue, lit with LEDs on two sides.

At Bourke Street Mall, Melbourne CBD, two giant torches celebrating the 2006 Commonwealth Games were constructed to greet the vast influx of visitors and to light the city's sporting spirit. Shifting through the entire colour spectrum, the torches draw attention from all around.

Designer architectural lighting for effect

At Mira Mira, LED lighting was used to bring imagination to life, fantasy to reality, all with the flick of a switch. "It's all about fantasy. Lighting adds to the fantasy. Even subtle shifts in colour can change the mood dramatically", says Nobby Ward, founder, designer and developer of Mira Mira.

Easily controlled LED lighting technology offers the ability to subtly or dramatically alter the look and atmosphere of a venue.

Dragon Manor, a reception venue located at Mira Mira Fantasy Accommodation in Gippsland, Victoria, utilised Coolon's Emblazon Downlighting, adding rich colour and character to the Dungeon room. "We set the colour and intensity of the lights depending on the mood we are trying to create for each function".
